

EMHIP Data System

Functional Requirements Specification

Version 2.0 – Updated Scope

1. Executive Summary

Following the implementation of the new EMHIP model within the hubs which separates guests into pathways that determine operations, the scope of the existing data system requires expansion beyond minor field amendments.

The revised system must support:

- Structured workflow aligned to the pathway model
- Clear pathway classification
- Caseload allocation and visibility
- Engagement tracking through defined status rules
- Outcome monitoring (DIALOG)
- Action tracking
- Service-level dashboard reporting

This document outlines the revised functional requirements necessary to align the system with the approved service model.

2. Relationship to Existing System

The current system was developed based on a narrower scope focused primarily on demographic and form amendments.

It does not currently support:

- Pathway classification
- Automated engagement status logic
- Caseload allocation
- Urgent escalation logic
- Action tracking and reminders
- Structured dashboard reporting

The requirements outlined below represent structural enhancements necessary to align the system with the updated EMHIP service model.

3. Service Model Context

All guest data would need to be streamlined into 1 of the following pathways

3.1 Primary Pathways

1. **Wellbeing Support** – Regular one-to-one support with a Community Mental Health Worker (CMHW).
2. **Additional / Clinical Support** – Structured or CPN-led support for higher complexity or acute need.
3. **Community & Recovery** – Activities and hospitality-based support without active one-to-one mental health input.

3.2 Cross-Cutting Support

- Advice first Aid – Available across all pathways.

3.3 Urgent Support

Urgent Support represents a temporary escalation state when safety concerns arise. It is separate from both pathway and engagement status.

4. System Workflow Requirements

4.1 Guest Entry Logic

- System must allow classification as New Guest or Existing Guest.
- New Guests default to 'New' status and cannot become Active until Initial Conversation is completed.
- New guests should have a demographic details page only for registration purposes
- The initial conversation form would be edit of the current '*add contact*' form
- If Existing Guests comes to hub, must be able to search guest and must display demographic details, current pathway, status, assigned CMHW, and last activity date.

4.2 Initial Conversation Page (edit of add contact form)

- Presenting Problem (text field)
- DIALOG scale completion with automatic score calculation (this is currently the MH assessment form – would need to change the fields)
- Immediate Risk toggle (Yes/No – mandatory)
- Mandatory pathway classification to be added for each person
- Named CMHW allocation (where applicable)
- Next contact date (mandatory for relevant pathways)
- Actions tracker – a field with dates/ times for next actions due for the guest

4.3 Pathway Classification Logic

- Mandatory for all Active guests
- Must be timestamped and stored historically
- Visible on guest dashboard
- Independent from engagement status

4.4 Caseload Allocation Logic

- Mandatory CMHW allocation for Wellbeing and Additional / Clinical pathways
- Active caseload per CMHW must be visible
- Reassignment must be logged

4.5 Urgent Support Logic

- Automatic urgent flag when Immediate Risk is marked Yes
- Mandatory crisis action notes
- Mandatory follow-up within 72 hours
- Timestamped urgent episode history

4.6 Follow-Up Module (currently labeled outcome)

- This will be filled in every time a guest comes to the hub
- Chronological display of entries
- Mandatory classification of the note add: Casework, Activity, Meeting, Daily Log
- Automatic update of last activity date
- Ability to edit actions and add reminders

4.7 Engagement Status Logic

- New – Registered but Initial Conversation not completed
- Active – Activity recorded within **past 3 months**
- On Hold – No activity within past 3 months
- Automatic status transition based on last activity date

5. Dashboard & Reporting Requirements

5.1 Service-Level Dashboard

- Total Active, On Hold, and New guests
- Guests seen Today / Week / Month / Custom range
- Pathway distribution counts and percentages
- Clinical complexity indicators (SMI, medication, Trust involvement, CPN involvement)
- Caseload per CMHW (personal dashboards)
- Urgent case monitoring
- Drill-down to guest-level lists

5.2 Outcome Monitoring – DIALOG (Phase 2)

- Individual-level DIALOG score history
- Automatic total score calculation
- Baseline vs most recent score comparison
- Service-level aggregated outcome analysis

5.3 Data Quality Monitoring

- Missing pathway classification
- Missing Initial Conversation

- Missing DIALOG scores
- Incomplete demographic fields
- Guests automatically moved to On Hold

5.4 Export Capability

- CSV and Excel export functionality
- Export of pathway, caseload, and outcome data
- Support for future integration with external reporting tools

5. Data Fields & Form Requirements

This is based on changes we had requested in the original document. These are still relevant but would be on the 'Initial Conversation' Page.

6.1 Demographics

- Marital Status (dropdown)
- Living Group (dropdown)
- Housing Status (dropdown)
- Economic Activity Status (dropdown)

6.2 Referral Information

- Primary or Secondary Referral classification
- Structured subcategories for Secondary Referral

6.3 Health & Psychiatric History

- Long-term health condition (Yes/No)
- Physical illness (text field)
- Past mental health difficulties and treatment history
- Family mental health history

6.4 Current Service Involvement

- Mental Health Services (Team / Clinician)
- Social Services (Team / Coordinator)

6.5 Medication

- Current medication list

6.6 Assessment Enhancement

- Automatic total score calculation for assessment forms

6.7 Terminology Updates

- Outcome → Presenting Problem
- What brought you → Description of problem
- Notes → Follow-Up

7. Data Migration Requirements

7.1 Scope of Migration

The following data must be migrated where available:

- Guest demographic information
- Referral information
- Health and psychiatric history
- Medication information
- Historical notes (to populate Follow-Up timeline)
- Historical DIALOG scores (including dates)
- Current open/active guests
- Current staff allocations

7.2 Data Mapping

- Existing InForm fields must be mapped to the new system structure.
- Where pathway classification does not exist historically, a temporary default state may be applied, with manual review required.
- Historic timestamps must be preserved.

8. Proposed Phased Implementation

Phase 1 – Core Build

- Workflow logic and status automation
- Pathway classification
- Caseload allocation
- Urgent flag logic
- Basic dashboard functionality
- DIALOG total score calculation
- Export functionality

Phase 2 – Enhanced Analytics

- Advanced interactive dashboards
- Aggregated DIALOG trend reporting
- Visual outcome analytics
- Enhanced filtering and comparison tools

Appendix:

Current workflow to be implemented within hubs
